EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. George Kaplan on 12/17/2009.

In page 10, lines 19-20 of the original Specification filed on 12/27/2004, the expression "another of said two clamping locations" has been deleted and replaced with the expression --the first clamping location--.

In page 2, line 16 of the Preliminary amendment to the Specification filed on 12/27/2004, the term "relares" has been changed to --relates--.

In line 1 of the Abstract, the term "thin rods" has been changed to --a thin rod--.

In line 2 of the Abstract, the word "a said" has been changed to --the--.

In lines 2 and 3 of the Abstract, the term "first clamping means" (both occurrences) has been changed to --first clamping device--.

Claims 3-9 and 13-30 have been cancelled and replaced with the following new claims 33-35.

Claim 33 (new): An arrangement for clamping a thin rod (3) of glass or quartz having a diameter below 1 mm in two mutually-spaced clamping locations for holding said rod extended between the two clamping locations,

said arrangement comprising first clamping means arranged to clamp said rod (3) in a first clamping location, said first clamping means having a first clamping member (22) with a clamp face (23) shaped as a substantially V- shaped groove for receiving the rod in the groove (24), and a second clamping member (21) having a substantially flat opposing clamp face for retaining the rod in the groove,

wherein the arrangement further comprises a first driving means (26) for moving said first clamping member for creating a rectilinear relative movement of said clamping members (21,22) towards and away from each other for clamping and releasing said rod, respectively, and

an additional member (14) besides said first (22) and second (21) clamping members, said additional member having at least one inclined surface and a second drive means for moving said additional member laterally towards said rod being clamped in the first clamping location through said first clamping means, wherein the at least one inclined surface (17, 18) is brought into abutment against the rod for influencing the rod by sliding thereof upon said at least one inclined surface so that the rod reaches a position desired for said first clamping location before clamping the rod by said first clamping means in said first clamping location, and

wherein said additional member (14) comprises two members (15) extending from a frame (16) and being arranged on opposite sides of said first (21) and second (22) clamping members, and each of the two members has two oppositely-inclined surfaces (17, 18).

Art Unit: 3724

Claim 34 (new): An arrangement according to claim 33, wherein the two oppositely-inclined surfaces (17, 18) are oppositely inclined with respect to a plane including said two clamping locations, and the two oppositely-inclined surfaces are moved by said second driving means (19) laterally towards said rod for moving the rod to a seat in an intersection between said two oppositely-inclined surfaces (17, 18) as seen in the direction from one clamping location to the other.

Claim 35 (new): An arrangement according to claim 33, wherein said at least one inclined surface (17, 18) is designed for adjusting the height of said rod (3) at said first clamping location before the rod is clamped there.

2. The following is an examiner's statement of reasons for allowance: claim 33 is allowable for setting forth an arrangement for clamping a thin rod of glass or quartz having a diameter less than 1mm comprising a clamping means including a first clamping member having a V-shaped groove and a second clamping member having a flat surface for retaining the rod in the groove; and an U-shaped additional member, wherein the U-shaped additional member encompasses the clamping means and is used for setting the rod at a desired location so that the clamping means can precisely clamp the rod.

For examples, Hattori et al. (6,668,128,), Ridway (4,473,942) and Kazama (6,634,079) teach an arrangement for clamping a thin rod of glass or quartz having a diameter below 1mm comprising a clamping means including a first clamping member having a V-shaped groove and a second clamping member having a flat surface for retaining the rod in the groove. However, they do not teach a U-shaped additional member encompassing the clamping means and being

Art Unit: 3724

used for setting the rod at a desired location so that the clamping means can precisely clamp the rod.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
